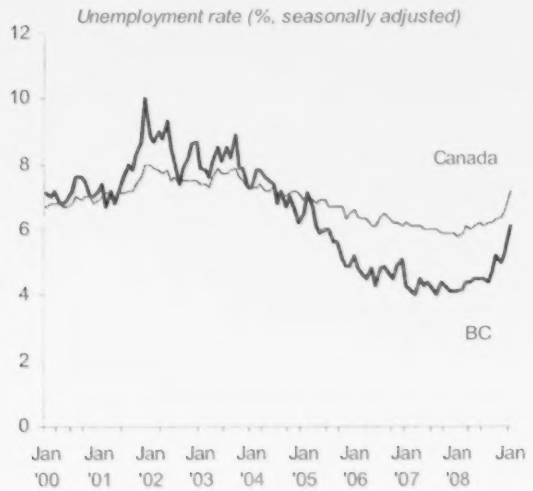
Labour Force Statistics ◆ January 2009

(All labour force statistics are seasonally adjusted, unless otherwise indicated)

Jobless rate jumps to 6.1%

The province's unemployment rate leaped 0.8 percentage points higher to 6.1% in January, the highest month-over-month increase in the jobless rate since late 2001. Employment dropped 1.5%, representing a loss of 35,100 jobs as British Columbia continued to feel the pinch of the global economic downturn. The employment decline in BC was deeper than in any other province and nearly twice the national average (-0.8%). Fewer British Columbians were seeking work as BC's labour force shrank 0.7%. Without this sharp contraction, the province's unemployment rate would have been higher.

Joblessness mounts in BC and across Canada



BC Stats

Employment in goods sector plummets

The goods sector took a drubbing in January as employment tumbled 6.9%, the fourth straight month of little to no growth, as nearly every industry in the sector registered job losses. Manufacturers shed nearly one-tenth (-9.6%) of their workforce representing 18,100 jobs in that industry while job losses continued to accumulate in the construction industry (-4.8%), which saw its fourth consecutive monthly decline in January. Since September, construction has seen 31,900 jobs eliminated as building activity has dried up. After two strong months of gains late in 2008, employment weakened in forestry, fishing & mining (-5.9%).

Employment in the service sector was 0.1% lower than in the previous month. The number of jobs grew in several service-based industries, most significantly in professional, scientific & technical (+4.6%), health care (+2.2%) and finance, insurance & real estate (+1.5%). However, these gains were offset by a drop in employment in other industries such as transportation & warehousing (-4.3%) and trade (-1.9%).

Men disproportionately affected by recent round of job losses

While men (male workers aged 15 years and older) represent a little more than half of employed British Columbians, more than four-fifths (81%) of all job losses occurring in January were experienced by men resulting in a 1.2 percentage point jump in male unemployment (to 6.9%). Looking back, male employment in BC has been shrinking steadily since September 2008, resulting in the elimination of 55,200 jobs previously held by men. With nearly 90% of the jobs in manufacturing and approximately 75% of positions in construction historically held by

men, it is not surprising that heavy job losses in these industries would affect them more adversely than it would affect women.

Job cuts in the goods sector has had a greater impact on employment for men than women

BC Stats

However, since males hold nearly six out of ten (58%) full-time jobs in the province, positions that typically have higher wages and benefits than their part-time counterparts, this dramatic decline in the number of workers with full-time employment could put considerable pressure on household income levels, at least in the short-run.

Expanding labour force results in higher unemployment in many of BC's regions

Nowhere in the province were job losses felt more keenly than in Cariboo where employment plummeted (-7.2%, *3-month moving average*). Kootenay (-1.0%) and Mainland/Southwest (-1.6%) also saw employment opportunities shrink.

However, many regions saw gains in the number of jobs offered, but had these increases overshadowed by a rising number of people looking for work. In Northeast, employment rose 8.5%, but an 11.0% increase in the size of the region's labour force pushed unemployment 1.0 percentage points higher to 4.6%. While there were 4.0% more jobs in Vancouver Island/Coast, the number of job-seekers was up by 4.7% resulting in a higher jobless rate (5.1%). Similar scenarios unfolded in Thompson/Okanagan where unemployment rose to 7.0% and North Coast/Nechako where the jobless rate jumped to 9.3%.

In BC's two largest cities employment in both Vancouver (-1.6%) and Victoria (-0.7%) was down.

The Nation

Employment fell 0.8% in January, pushing Canada's jobless rate to 7.2%. This was the largest month-over-month percentage drop in employment since the 0.7% decline recorded in mid-1982. While BC lost the largest percentage of jobs (-1.5%) it was not alone in experiencing job losses as employment fell sharply in both Ontario (-1.1%) and Quebec (-0.7%).

NOTES: 1. *Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.*

2. *Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.*

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Data Services at (250)387-0327 or write to BC.Stats@gov.bc.ca

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate(employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC Stats on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.
